Streersman CPQ suite for Odoo

Give your customers and sales reps tools to configure products with the options they need. Odoo will dynamically generate multi-level BOMs and manufacturing orders, and will calculate pricing based on component prices with necessary upcharges and margins.

The CPQ suite consists of 4 major apps by Steersman:

Dynamic BOM

Build 100,000 unique BOMs through 100 component rules

- Product attribute value combinations define components
- Passes product attribute specs to sub-assemblies or multi-variant components

Advanced Pricing Engine

Setup margin logic to automatically price your products and variants

- One or many margin formulas set prices for customers and customer groups
- Product cost basis from inventory value, replacement cost, or user-defined cost
- Assemblies calculate component costs 3+ production layers deep

Options Configurator

Define the product option combinations to sell and hide

- Set default and excluded attribute values based on other selected options and option combinations

Megastore for Odoo

High-performance online store right from your ERP

- Lists all configuration variations with unique URLs, priced based on components, upcharges, and margins
- Logged-in clients shop at their special prices
- Production status updates for made-to-order products are sent automatically

Steersman's CPQ suite for Odoo is included in our subscription-based Odoo services
